Manual Reprocessing

Work Steps – Manual Procedure

1. Manual cleaning

- Manual cleaning of the exterior
  - Tap water ± 4 °C (36 ± 1 °F)
  - Ultrasonic cleaning (ultrasonic cleaning solution)
  - Water steam cleaning (water steam)

- Manual interior cleaning
  - KaVo SPRAYrotor
  - Place the medical device on the matching coupling on the KaVo SPRAYrotor
  - Follow the instructions for use of the disinfectant.

2. Manual disinfection

- Manual disinfection of the exterior
  - 3-5 seconds. KaVo Cleanpac bags offer optimum protection for the personnel.

3. Internal cleaning & servicing – automatically

- Instruments with interchangeable heads:
  - Remove the bur from the motor
  - Suction out debris from the chuck

- Instruments with interchangeable heads:
  - Remove the fluids from the medical device
  - Remove the bur from the motor

4. Disinfection

- Thermal disinfection:
  - Not packed in the steriliser
  - Can be sterilised in steam sterilisers (autoclaves), as per EN 13098-1 (2010) and have a maximum temperature stability of up to 130 °C

- KaVo MULTIflex couplings are not sterilisable.

5. Sterilisation

- KaVo medical devices marked with the thermal disinfection symbol can be sterilised in steam sterilisers (autoclaves), as per EN 13098-1 (2010) and have a maximum temperature stability of up to 130 °C.

- KaVo MULTIflex couplings are not sterilisable.

Reprocessing with washer disinfector and autoclave

Work Steps – Mechanical Procedure

1. External and internal cleaning / external and internal disinfection

- External and internal cleaning
  - KaVo recommends washer disinfectors in accordance with EN ISO 15883-1 that are compatible with the medical devices.

- External and internal disinfection
  - KaVo SPRAYrotor
  - Place the medical device on the matching coupling on the KaVo SPRAYrotor
  - Follow the instructions for use of the disinfectant.

2. Thermal disinfection:

- Not packed in the steriliser
  - Can be sterilised in steam sterilisers (autoclaves), as per EN 13098-1 (2010) and have a maximum temperature stability of up to 130 °C

- KaVo MULTIflex couplings are not sterilisable.

- KAQUATTOcare Plus has a programme for the care of the chuck.

- KaVo recommends servicing the chuck immediately after the operation of the medical device.

3. Sterilisation

- KaVo MULTIflex couplings are not sterilisable.

- KaVo products bearing the sterilisation symbol can be sterilised in steam sterilisers (autoclaves).

- KaVo SPRAYrotor
  - Place the medical device on the matching coupling on the KaVo SPRAYrotor
  - Follow the instructions for use.

Putting the products back into clinical use

- KaVo SPRAYrotor
  - Place the medical device on the matching coupling on the KaVo SPRAYrotor
  - Follow the instructions for use.

- KaVo products bearing the sterilisation symbol can be sterilised in steam sterilisers (autoclaves).

- KaVo SPRAYrotor
  - Place the medical device on the matching coupling on the KaVo SPRAYrotor
  - Follow the instructions for use.

Advantages:

- The current regulations on validating the devices locally must be complied with, and be instigated and validated by the owner.

- Please comply with the detailed information in the instructions for use of the medical devices.

Notes

- Only KaVo medical devices marked with the thermal disinfecting symbol (1) or sterilisation symbol (2) may be processed in the washer disinfecter (BDI) or sterilised in the steam steriliser.

- KaVo CLEANspray and KaVo DRYspray.

- KaVo SPRAYrotor
  - Place the medical device on the matching coupling on the KaVo SPRAYrotor
  - Follow the instructions for use of the disinfectant.

- KaVo Spray 2112 A
  - From the KaVo care system.

- KaVo CLEANspray 2140A
  - Validated internal cleaning (BDI) and cleaning (EN ISO 14995), disinfection (EN ISO 15883-1) and sterilisation (EN ISO 14998).

- KaVo DRYspray 2117
  - Immediately after internal disinfection, lubricate the medical device immediately with lubricating solution.

- KaVo DRYspray 2117
  - From the KaVo care system.

- KaVo CLEANspray and KaVo DRYspray.

- KaVo DRYspray 2117
  - From the KaVo care system.

- KaVo CLEANspray and KaVo DRYspray.

- KaVo CLEANspray 2140A
  - Validated internal cleaning (BDI), cleaning (EN ISO 14995), disinfection (EN ISO 15883-1) and sterilisation (EN ISO 14998).

- KaVo DRYspray 2117
  - From the KaVo care system.
